About This Release

Eclipse Scout 7.1 is a preview version of the Eclipse *Photon* release. It will be released in June 2018 ([release schedule](#)). The latest version of this release is: None released yet.

If you are upgrading from version 6.1, please also read the migration guide for the 7.0 (*Oxygen*) release:

<https://eclipsescout.github.io/7.0/migration-guide.html>

- [\[PLACEHOLDER\]](#)

You can see the [detailed change log](#) on GitHub.

Service Releases

The following changes were made after the initial 7.1 release (Eclipse Photon release). The following notes relate to a *service release*.

Photon.1 (7.1.100) Release expected on September, 2018

Attention: The here described functionality has not yet been released and is part of an upcoming release.

Obtaining the Latest Version

Runtime (Scout RT)

Scout RT artifacts are distributed via Maven:

- [7.1.0.001_Photon](#) on *Maven Central*
- [7.1.0.001_Photon](#) on *mvnrepository.com*

Usage example in the parent POM of your Scout application:

```
<dependency>
  <groupId>org.eclipse.scout.rt</groupId>
  <artifactId>org.eclipse.scout.rt</artifactId>
  <version>7.1.0.001_Photon</version>
  <type>pom</type>
  <scope>import</scope>
</dependency>
```

Eclipse IDE Tooling (Scout SDK)

You can download the complete Eclipse IDE with Scout SDK included (EPP) here:
[Eclipse for Scout Developers](#)

To install the Scout SDK into your existing Eclipse IDE, use this update site:

http://download.eclipse.org/scout/releases/7.1/7.1.0/001_Photon/

Demo Applications

The demo applications for this version can be found on the [features/version/7.1.0.001_Photon](#) branch of our docs repository on GitHub.

If you just want to play around with them without looking at the source code, you can always use the deployed versions:

- <https://scout.bsi-software.com/contacts/>
- <https://scout.bsi-software.com/widgets/>
- <https://scout.bsi-software.com/jswidgets/>

Java 8 required

The required Java Runtime Environment (JRE) to run an Eclipse Scout application has changed: Starting with Eclipse Scout *Photon* (Scout 7.1 and newer), a Java 8 (or newer) runtime is required.

To reflect this change some existing Scout classes have been migrated to the newly available Java 8 classes:

`org.eclipse.scout.rt.platform.filter.IFilter` replaced with `java.util.function.Predicate`.

`org.eclipse.scout.rt.platform.filter.AlwaysFilter` replaced with `java.util.function.Predicate` e.g. `a → true`.

<code>org.eclipse.scout.rt.platform.filter.NotFilter</code>	replaced	with
<code>java.util.function.Predicate#negate</code> .		

`org.eclipse.scout.rt.platform.filter.OrFilter` replaced with `java.util.function.Predicate#or`.

<code>org.eclipse.scout.rt.platform.util.concurrent.IConsumer</code>	replaced	with
<code>java.util.function.Consumer</code> .		

<code>org.eclipse.scout.rt.platform.util.concurrent.IFunction</code>	replaced	with
<code>java.util.function.Function</code> .		

<code>org.eclipse.scout.rt.platform.util.concurrent.IBiConsumer</code>	replaced	with
<code>java.util.function.BiConsumer</code> .		

<code>org.eclipse.scout.rt.platform.util.concurrent.IBiFunction</code>	replaced	with
<code>java.util.function.BiFunction</code> .		

New SDK Feature in Eclipse: Search for missing NLS keys

If NLS keys are used in the code that do not exist in a properties file, an ugly placeholder is displayed to the user. To find such missing translations the new Menu **Scout** → **Search missing text keys...** may be handy. The result is listed in the Eclipse **Search** view.

The search also takes the scope of each NLS key into account. So that the key is considered to be available there must be a **TextProviderService** with that key on the classpath of that module.

Reported false positives can be suppressed using the following comment at the end of the corresponding line: **NO-NLS-CHECK**. Matches on that line are then not reported in future searches anymore.
